

WEEE Number: 80133970

# **INSTRUCTION MANUAL**

# HYBRID SOLAR INVERTER SINGLE PHASE

# INTRODUCTION

Thank you for selecting and buying V-TAC Product. V-TAC will serve you the best. Please read these instructions carefully & keep this user manual handy for future reference. If you have any another query, please contact our dealer or local vendor from whom you have purchased the product. They are trained and ready to serve you at the best.

# Multi-Language Manual QR CODE

Please scan the QR code to access the manual in multiple languages.

# **WARNING**

- 1. Please make sure to turn off the power before starting the installation.
- 2. Installation must be performed by a qualified electrician.

- "Danger" indicates a hazardous situation which, if not avoided, will result in death or serious injury.
- "Warning" indicates a hazardous situation which, if not avoided, could result in death or serious injury.
- "Caution" indicates a hazardous situation which, if not avoided, could result in minor or moderate injury..
- Danger to life due to high voltages in the inverter!
- All work must be carried out by qualified electrician.
- The appliance is not to be used by children or persons with reduced physical sensory or mental capabilities, or lack of exrerience and knowledge, unless they have been given supervision or instruction.
- Children should be supervised to ensure that they do not play with the appliance.
- Danger of burn injuries due to hot enclosure parts!
- During operation, the upper lid of the enclosure and the enclosure body may become hot.
- Only touch the lower enclosure lid during operation.
- Possible damage to health as a result of the effects of radiation!
- Do not stay closer than 20 cm to inverter for any length of time.
- Ensure input DC voltage ≤Max. DC voltage .Over voltage may cause permanent damage to inverter or other losses, which will not be included in warranty!
- Authorized service personnel must disconnect both AC and DC power from inverter before attempting any maintenance or cleaning or working on any circuits connected to inverter.
- Do not operate the in verter when the device is running
- Over-voltage protection with surge arresters should be provided when the PV power system is installed.
- The grid connected inverter is not fitted with SPDs in both PV input side and MAINS side.
- High leakage current! Earth connection essential before connecting supply.

#### Note!

- "Note" provides tips that are valuable for the optimal operation of our product.
- Grounding the PV generator.
- Comply with the local requirements for grounding the PV modules and the PV generator. It is recommends connecting the generator frame and other electrically conductive surfaces in a manner which ensures continuous conduction and ground these in order to have optimal protection of system and persons.

- Prior to the application, please read this section carefully to ensure correct and safe application. Please keep the user manual properly.
- Accesories only together with the inverter shipment are recommended here. Otherwise may result in a risk of fire, electric shock, or injury to person.
- Make sure that existing wiring is in good condition and that wire is not undersized.
- Do not disassemble any parts of inverter which are not mentioned in installation guide. It contains no user-serviceable parts. See Warranty for instructions on obtaining service. Attempting to service the inverter yourself may result in a risk of electric shock or fire and will void your warranty.
- Keep away from flammable, explosive materials to avoid fire disaster. The installation place should be away from humid or corrosive substance.
- Authorized service personnel must use insulated tools when installing or working with this equipment.
- PV modules shall have an IEC 61730 class A rating.
- Never touch either the positive or negative pole of PV connecting device.
- Strictly prohibit touching both of them at the same time.
- The unit contains capacitors that remain charged to a potentially lethal voltage after the MAINS , battery and PV supply has been disconnected.
- Hazardous voltage will present for up to 5 minutes after disconnection from power supply.
- CAUTION-RISK of electric shock from energy stored in capacitor, Never operate on the inverter couplers, the MAINS cables, Battery cables, PV cables or the PV generator when power is applied. After switching o ffthe PV , battery and Mains, always wait for 5minutes to let the intermediate circuit capacitors discharge before unpluging DC ,battery inplug and MAINS couplers.
- When accessing the internal circuit of inverter, it is very important to wait 5 minutes before operating the power circuit or demounting the electrolyte capacitors inside the device. Do not open the device before hand since the capacitors require time sufficiently discharge!
- Measure the voltage between terminals UDC+ and UDC- with a multi-meter(impedance at least 1Mohm) to ensure that the device is discharged before beginning work (35VDC) inside the device.

#### Surge protection devices (SPDs) for PV installation

- Lightning will cause a damage either from a direct strike or from surges due to a nearby strike.
- Induced surges are the most likely cause of lightning damage in majority or installations, especially in rural areas where electricity is usually provided by long overhead lines. Surge may be included on both the PV array conduction and the AC cables leading to the building.
- Specialists in lightning protection should be consulted during the end use application. Using appropriate external lightning protection, the effect of a direct lightning strike into a building can be mitigated in a controlled way, and the lightning current can be discharged into the ground.
- Installation of SPDs to protect the inverter against mechanical damage and excessive stress include a surge arrester in case of a building with external lightning protection system (LPS) when separation distance is kept.
- To protect the DC system, surge suppression device (SPD type2) should be fitted at the inverter end of the DC cabling and at the array located between the inverter and the PV generator, if the voltage protection level (VP) of the surge arresters is greater than
- 1100V, an additional SPD type 3 required for surge protection for electrical devices.
- To protect the AC system, surge suppression devices (SPD type2) should be fitted at the main incoming point of AC supply (at the consumer's cutout),located between the inverter and the meter/distribution system; SPD (test impulse D1) for signal ine according I to EN 61632-1.
- All DC cables should be installed to provide as short a run as possible, and positive and negative cables of the string or main DC supply should be bundled together.

- Avoiding the creation of loops in the system.
- Spark gap devices are not suitable to be used in DC circuits once conducting, they won't stop conducting until the voltage across their terminals is typically more than 30 volts.
- Anti-Islanding Effect Islanding effect is a special phenomenon that grid-connected PV system still supply power to the nearby grid when the voltage loss is happened in the power system. It is dangerous for maintenance personnel and the public. X1-Hybrid series inverter provide Active Frequency Drift(AFD) to prevent islanding effect.

#### **PE Connection and Leakage Current**

- The end-use application shall monitor the protective conductor by residual current operated protective device (RCD) with rated fault current Ifn≤240mA which automatically disconnects the device in case of a fault. The device is intended to connect to a PV generator with a capacitance limit of approx 700nf.
- Incorrect grounding can cause physical injury, death or equipment malfunction and increase electromagnetic.
- Make sure that grounding conductor is adequately sized as required by safety regulations.
- Do not connect the ground terminals of the unit in series in case of a multiple installation. This product can cause current with a d.c component, Where a residual current operated protective (RCD) or monitoring (RCM) device is used for protection in case of direct or indirect contact, only an RCD or RCM of type B is allowed on the supply side of this product. For United Kingdom
- The installation that connects the equipment to the supply terminals shall comply with the requirements of BS 7671.
- Electrical installation of PV system shall comply with requirements of BS 7671 and IEC 60364-7-712.
- No protection settings can be altered.
- User shall ensur e that equipment is so installed, designed and operated to maintain at all times compliance with the requirements of ESQCR22(1)(a). For Australia and New Zealand
- Electrical installation and maintenance shall be conducted by licensed electrician and shall comply with Australia National Wiring Rules. Battery Safety Instructions BD series inverter should be worked with high voltage battery, for the specific parameters such as battery type, nominal voltage and nominal capacity etc., please refer to section 4.3. As accumulator batteries may contain potential electric shock and short-circuit current danger, to avoid accidents that might be thus resulted, the following warnings should be observed during battery replacement:
- 1: Do not wear watches, rings or similar metallic items.
- 2: Use insulated tools.
- 3: Put on rubber shoes and gloves.
- 4: Do not place metallic tools and similar metallic parts on the batteries.
- 5: Switch o ffload connected to the batteries before dismantling battery connection terminals.
- 6: Only personal with proper expertise can carry out the maintenance of accumulator batteries.

# **EXPLANATION OF SYMBOL**

Symbol	Explanation
CE	CE mark. The inverter complies with the requirements of the applicable CE guildlines.
	TUV certified.
	RCM remark.
SAA	SAA certification.
	Beware of hot surface. The inverter can become hot during operation. Avoid contact during operation.
4	Danger of high voltages. Danger to life due to high voltages in the inverter!
	Danger. Risk of electric shock!
	Observe enclosed documentation.
<b>A</b>	The inverter can not be disposed together with the household waste.  Disposal information can be found in the enclosed documentation.
	Do not operate this inverter until it is isolated from battery, mains and on-site PV generation suppliers.
A C	Danger to life due to high voltage. There is residual voltage existing in the inverter after powering off, which needs 5 min to discharge.  • Wait 5 min before you open the upper lid or the DC lid.

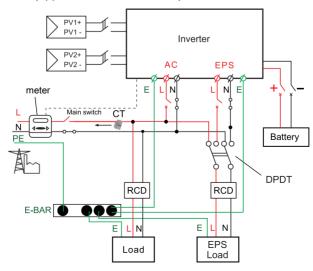

This chapter follows the requirements of the European low voltage directives, which contains the safety instructions and conditions of acceptability for the endues system. which you must follow when installing, operating and servicing the unit. If ignored, physical injury or death may follow, or damage may occur to the unit. Read this before you work on the unit. If you are unable to understand the dangers, warnings, cautions or instructions, please contact an authorized service dealer before installing. Operating and servicing the unit. The Grid connected inverter meets the requirement stipulated in Low Voltage Directive (LVD) 2014/35/EU and Electromagnetic Compatibility (EMC) Directive 2014/30/EU. The unit is based on: EN 62109-1:2010; EN 62109-2:2011; IEC 62109-1 (ed.1); IEC62109-2(ed.1);EN 61000-6-3:2007+A:2011;EN 61000-6-1:2007;EN 61000-6-2:2005. In case of installation in PV system, startup of the unit (i.e. start of designated operation) is prohibited until it is determined that the full system meets the requirements stipulated in EC Directive (2014/35/EU,2014/30/EU, etc.), The grid connected inverter leave the factory completely connecting device and ready for connection to the mains and PV supply, the unit shall be installed in accordance with national wiring regulations. Compliance with safety regulations depends upon installing and configuring system correctly, including using the specified wires. The system must be installed only by professional assemblers who are familiar with requirements for safety and EMC. The assembler is responsible for ensuring that the end system complies with all the relevant laws in the country where it is to be used. The individual subassembly of the system shall be interconnected by means of the wiring methods outlined in national/inter national such as the national electric code (NFPA) No.70 or VDE regulation 0107.

## INTRODUCTION

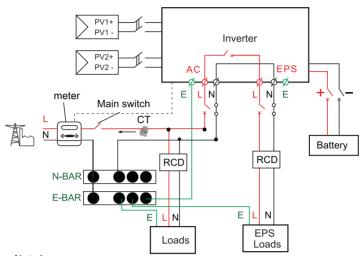

Hybrid Inverter series is a high quality inverter which can convert solar ene rgy to AC energy and store energy into battery

The inverter can be used to optimize self consumption, store in the battery for future use or feedin to public grid. Work mode depends on PV energy and user's preference. It can provide power for emergency use during the grid lost by using the energy from battery and inverter(generated from PV).

System Diagram 1 (applies to most countries)

### System Diagram 2 (applies to wiring rules AS/NZS\_3000:2012 for Australia and New Zealand )

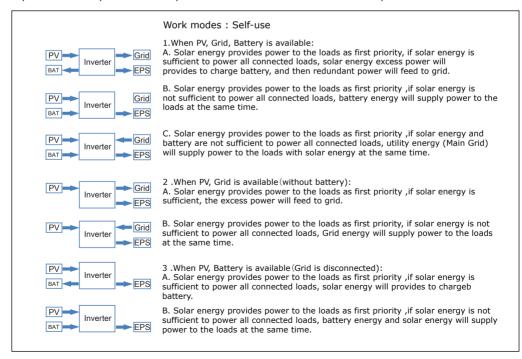

#### Note!

• The instrument and switch in the above figure are provided by users

#### Work Modes

Hybrid Inverter provides multiple work modes based on different requirements.

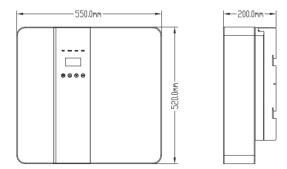

#### Work modes: Peak shift 1. When PV, Grid, Battery is available: A. On charge time, solar energy will charge battery as first priority. The excess energy will supply power to the loads. If solar energy is sufficient to supply loads and charge battery, and If there's still some extra energy, then the excess power will feed the power to grid PV Grid Inverter BAT FPS B. On charge time, solar energy will charge battery as first priority.then the excess solar energy will supply power to loads.If solar energy is not sufficient to charge PV Grid Inverter battery and supply loads, grid will supply all the connected loads with solar energy BAT **EPS** together. C. On discharge time, solar energy provides power to the loads as first PV Grid priority, if solar energy is sufficient to supply loads, and if there's still some Inverter extra energy from solar energy ,then the excess power and battery will **FPS** deliver the power to the grid at the same time. PV D. In the period of no charge or discharge, the solar power supply loads at Grid Inverter first priority, excess energy to the grid. BAT EPS 2. When Grid, Battery is available(PV is disconnected): Grid A. On charge time, grid will charge battery and supply power to the connected loads at the same time. Inverter EPS BAT -Grid B. On discharge time, if load power is less than battery power, battery will Inverter supply power to loads as first priority, the excess power will be feed to grid. EPS BAT Grid C. On discharge time, if load power is more than battery power, battery and Inverter grid will supply power to the loads at the same time. EPS BAT Work modes: Bat priority 1. When PV, Grid, Battery is available: A. Solar energy will charge battery as first priority, if solar energy is excess, the excess power will supply load. If there's still some extra energy, then the Grid Inverter BAT EPS excess power will feed the power to grid . B. Solar energy will charge battery as first priority, if solar energy is excess, the excess power will supply load. If solar energy is not sufficient to charge PV Grid Inverter EPS BAT battery and supply loads, grid will supply power to loads.

2. When Grid, Battery is available (PV is disconnected):

Grid will supply power to load and charge battery at the same time.

### **INSTALLATION**

Check for Physical Damage Make sure the inverter is intact during transportation. If there is any visible damage, such as cracks, please contact your dealer immediately.

### **PACKING LIST**

Open the package and take out the product, please check the accessories first. The packing list shown as below.

γ	
Object	Description
Α	Inverter
В	Bracket
С	Expansion screws and pan-head screws
D	PV connectors (2*positive, 2*negative)
E	AC terminals
F	PV pin connectors (2*positive, 2*negative)
G	Wifi module (optional)
Н	GPRS module (optional)
I	User manual

### **TOOLS REQUIRED FOR INSTALLATION**

Installation tools: crimping pliers for binding post and RJ 45, screwdriver, manual wrench etc

### **SPACE REQUIREMENT**

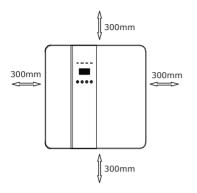

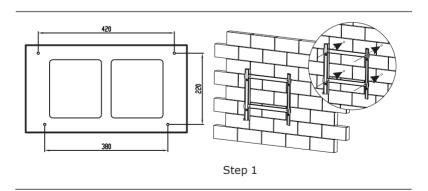

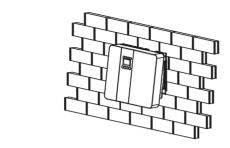

Table Available Space Size		
Position Min.size		
Left	300mm	
Right	300mm	
Тор	300mm	
Bottom	300mm	
Front	300mm	

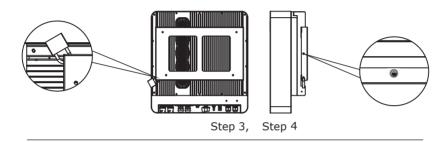

Step 1: Screw the wall bracket on the wall

- 1.1. Place the bracket on the wall and mark down the position of the 4 holes.
- 1.2. Drill holes with driller, make sure the holes are deep enough (at least 60mm) to support the inverter.
- 1.3. Install the expansion tubes in the holes, and tighten them. Then install the wall bracket with the expansion screws.
- Step 2: Place the inverter on the wall mounted bracket by holding the handle on the side.
- Step 3: Tighten the fixing screws on both sides of the inverter.
- Step 4: If necessary, costomer can install an anti-theft lock on the left-bottom of the inverter.

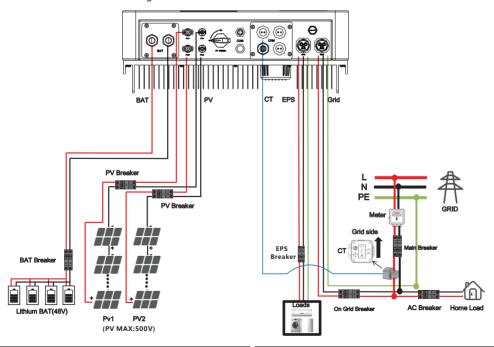

Step 2

# **ELECTRICAL CONNECTION**

Electrical connection diagram

#### GRID CONNECTION AND EPS CONNECTION

Hybrid inverter are designed for single phase grid. Voltage is 220/230/240V, frequency is 50/60Hz. Other technical requests should comply with the requirement of the local public grid.

Table 1 Cable and Micro-breaker recommended

MODEL	VT-66036103
E VERSION CABLE	4-5 mm <sup>2</sup>
E VERSION MICRO-BREAKER	20A
I VERSION CABLE	8-10mm²
I VERSION MICRO-BREAKER	50A

Micro-breaker should be installed between inverter and grid, any load should not be connected with inverter directly.

Step1. Check the grid voltage.

- 1.1 Check the grid voltage and compare with the permissive voltage range (Please refer to technical data).
- 1.2 Disconnect the circuit board from all the phases and secure against re-connection.

Step2. Remove the waterproof lid from the grid port on the inverter.

Step3. Make AC and EPS wires.

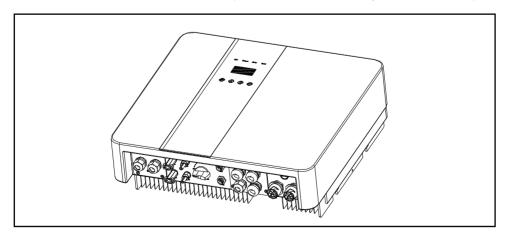

- 3.1 Choose the appropriate wire(Cable size: refer to Table 1).
- 3.2 Reserve about 60mm of conductor material sectional area and remove 10mm of insulation from the end of wire.

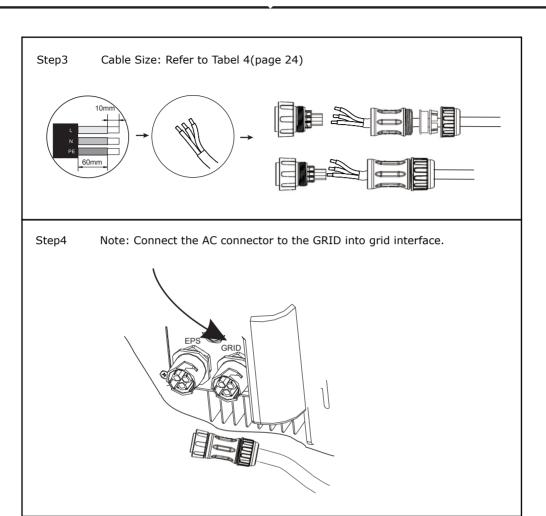

terminal and tighten the screws with a hexagonal wrench.

- 3.3 Separate the docking screw cap of the AC terminal from the housing portion and insert stripped wires into AC
- 3.4 Tighten the docking screw cap and housing portion of the AC terminal.

#### Step4.

Connect the AC connector to the GRID port of the inverter and tighten the screw cap . Connect the LOAD connector to the EPS port of the inverter and tighten the screw cap .

#### **PV CONNECTION**

Select PV modules with excellent function and reliable quality. Open-circuit voltage of module arrays connected in series should be <Max. DC input voltage;operating voltage should be conformed to MPPT voltage range.

MODEL	VT-66036103	VT-66036103	VT-66036103
Max. DC Voltage (V)	500	500	500
MPPT Voltage Range(V)	125-500	125-500	125-500

Warning!

PV module voltage is very high, which already achieve dangerous voltage range, please comply with electric safety rules when connecting. Please do not make PV positive or negative ground!

#### **CONNECTION STEPS:**

Step 1. Checking PV module to ensure PV is in open circuit state and ensure the PV+ and PV- ports of the PV string are correct.

Step 2. Separating the DC connector.

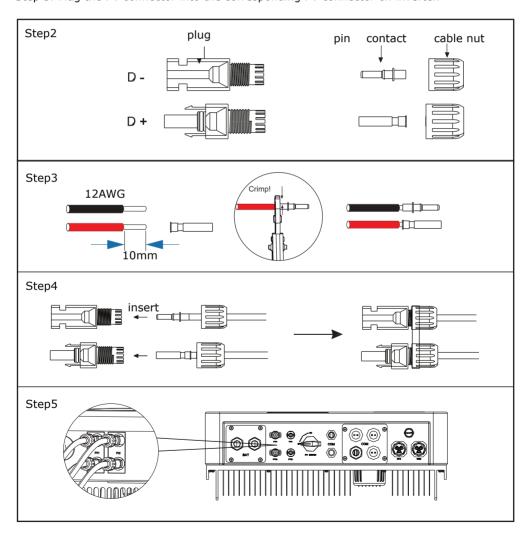

Step 3. Wiring

- 3.1 Choose the 12 AWG wire to connect with the cold-pressed terminal.
- 3.2 Remove 10mm of insulation from the end of wire.
- 3.3 Insert the insulation into pin contact and use crimping plier to clamp it.

Step 4. Insert pin contact through the cable nut to assemble into back of the male or female plug. When

you feel or heard a "click" sound the pin contact assembly is seated correctly.

Step 5. Plug the PV connector into the corresponding PV connector on inverter.

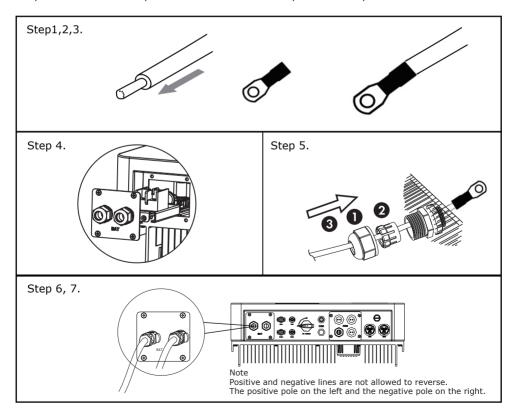

#### **Battery Connection**

Note

- 1.Before choosing battery, please note the maximum voltage of battery can not exceed 59V and the rated voltage of battery can not exceed 48V, and the battery communication should be compatible with Hybrid inverter.
- 2.Before connecting to battery, please install a nonpolarized DC(125A) breaker to make sure inverter can be securely disconnected during maintenance.
- 3. The connecting cable between the battery and the inverter shall be at least 4AWG.
- 4.The battery communication can only work when the battery BMS is compatible with the inverter.
- 5.To replace the battery, you need to turn off all switches and unplug the system communication line.
- 6.All the above wiring and operations must be carried out after the whole machine is powered down, and all of them need professional personnel to complete

#### **Power Connection Steps:**

- Step 1. Choose the 4AWG wire and strip the cable to 15mm.
- Step 2. Select two O-terminals with an aperture of M6.
- Step 3. Insert the stripping line into the O-terminal and clamp it with a crimping clamp.
- Step 4. Remove waterproof cover plate.
- Step 5. Disassemble the waterproof connector and pass the cable through the waterproof connector.
- Step 6. Connect the cable to the terminal of the inverter .
- Step 7. Assemble waterproof connectors and waterproof covers plate.

#### Communication interface definition

#### BMS PIN Definition

Communication interface between inverter and battery is RS485 or CAN with a RJ45 connector.

The wiring sequence of the crystal head conforms to the 568B standard: orange white, orange, green white, blue, blue white, green, brown white and brown.

	PIN	1	2	3	4	5	6	7	8
CAN	Definition	Х	Х	Х	BMS_CANH	BMS_CANL	Х	Х	Х
Rs485	Definition	Χ	Х	Х	Х	Х	GND	BMS_485A	BMS_485B

## DRY\_IO (RJ45 PIN) Definition

Reserved dry contact interface of the inverter.

	2	3	4				8
COM1	NO 1	NC 1	DI 1	DI 2	COM2	NO 2	NC 2

#### **DRM Connection**

DRM is provided to support several demand response modes by emitting control signals as below.

Note: Only PIN6(DRM0) is available now, and other PIN functions are being developed.

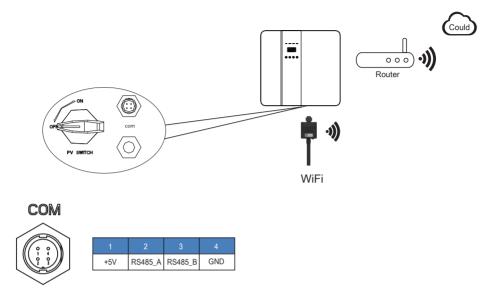

1	2	3	4	5	6	7	8
DRM1/5	DRM2/6	DRM3/7	DRM4/8	+5V	DRM0	GND	GND

#### WiFi And GPRS Connection(optional)

Inverter provides a WiFi port which can collect data from inverter and transmit it to monitoring-website by WiFi.

- Step1. Plug Wifi into "COM" port at the bottom of the inverter.
- Step2. Build the connection between the inverter and router.
- Step3. Create a user account online. (Please check the WiFi user manual for more details).

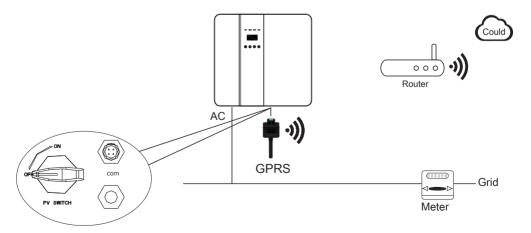

### **DIAGRAM**

# **GPRS CONNECTION**

 ${\sf GPRS}$  connection interface is consistent with WIFI interface, Please refer to the GPRS user manual for detailed connection steps.

### **DIAGRAM**

CURR:	10.00A	
POWER:	3000W	

### **5.4.7 DC VOLTAGE INTERFACE**

Interface	Description
DC VOLTAGE	BUS: Real-time voltage of bus capacitor of the machine.
BUS: 384V	LeakCurr: Real-time leak current of the machine.
LeakCurr: 0mA	

### **5.4.8 B ATTERY INTERFACE**

Interface	Description
BATTERY  VOLT: 300V  CURR: 10.00A  STA: C D F	Battery real-time voltage, current. STA: Battery status. C: Charge. D: Discharge. F: Full charge. Battery status depends on BMS instructions.

### **5.4.9 BATTERY CURRENT INTERFACE**

Interface	Description
BATTERY INFO TYPE: Lithiur TEMP: 26°C SOC: 30%	TYPE: Battery type:(lead acid, lithium battery) TEMP: Battery temperature. SOC: Percentage of battery surplus capacity
	<b>-</b>

#### **5.4.10 BATTERY CURRENT INTERFACE**

Interface	Description
BMS PRMETER CHAR VOL: 0.0V CHARGE: 50A DISCHA: 50A	CHAR VOL: Battery charging voltage. CHARGE: Battery charging current. DISCHA: Battery discharging current.

### **5.4.11 GRID-CONNECTED**

Interface	Description
GRID  VOLT: 0.0V  CURR: 0.00A  FREQ: 0.00Hz	VOLT: Gird real-time voltage. CURR: CT real-time current. FREQ: Grid real-time frequency.

# 5.4.12 INV

Interface	Description
INV VOLT: 0.0V CURR: 0.00A FREQ: 0.00Hz	VOLT: INV real-time voltage. CURR: INV real-time current. FREQ: INV real-time frequency.

### 5.4.13 LOAD

Interface	Description
LOAD  VOLT: 0.0V  CURR: 0.00A  PERCENT: 0%	VOLT: LOAD real-time voltage. CURR: LOAD real-time current. PERCENT: LOAD real-time percentage.

# **5.4.14 POWER**

Interface		Description
POW INV: GRID:	0.0W 0.0W	INV: INV power. GRID: Grid power.

### **5.4.15 POWER**

Interface	Description
POWER PV I/P: 0V LOAD: 0V BAT: 0W	PV I/P: PV power. LOAD: LOAD power. BAT: BAT power.

### **5.4.16 TEMPERATURE**

Interface	Description
TEMPERATURE INVER: 0°C DCDC: 0°C INSIDE: 0°C	INVER: INV Temperature.  DCDC: DCDC Temperature.  INSIDE: Internal ambient temperature of the machine.

### **5.4.17 STATE**

Interface	Description
STATE SYS: STANDBY INV: STANDBY DCDC: STANDBY	System information: Display complete machine status information, Including: Initialization, Standby, PV grid connection, Grid connection of battery, Hybrid power supply, etc.  INV: Displays the inverter status information.  DCDC: Displays charging and discharging status information

### SETTINGAS

### 5.5.1 State

Interface	Description
USER  → 1:SETUP  2:INQUIRE  3:STATISTIC	SETUP: Press Enter to user settings interface. INQUIRE: Query machine model, serial number, software version. STATISTIC: View machine run statistics.

# 5.5.2 SET P assword

Interface		Description
PASSWORD		Enter the password required for setting. The default password is "00000".
INPUT:	XXXXX	Press the Up or Down keys to adjust the number, press the Enter key to move the cursor forward, and press the Esc key move the cursor backward.

# 5.5.3 Setup

Interface	Description
SETUP  > 1:SYS SETTING 2:BAT SETTING 3:GRID STD 4:RUN SETTING 5:485 ADDRESS 6:BAUD RATE 7:LANGUAGE 8:BACKLIGHT 9:DATE/TIME 10:CLEAR REC 11:PASSWORD 12:MAINTENANCE 13:FCTRY RESET	This interface is used for various information inquiry options.  Press the Up/Down button to make the corresponding selection.  Press Enter button to enter the selected menu.  Press ESC button return to the user interface.  There are 13 options in total.

### 5.5.4.2 EPS en able

Interface	Description
EPS ENABLE 1:DISABLE  -> 2:ENABLE	When the Grid and PV are powered off, Enable the battery to supply power to the load, default option is enable.

### 5.5.4.3 Battery wake-up

, , , , , ,		
Interface	Description	
WAKE-UP EN  → 1:DISABLE  2:ENABLE	When the battery is low and the battery relay has been disconnected, the inverter will send instructions to the battery forcibly sucking relay by BMS, and the inverter will charge.  The default option is disabled. (Partial battery support)	

### 5.5.4.4 REM OTE CT RL

EN OTE COME		
Interface	Description	
	Remote control the inverter on or off. (Subsequent support)	
REMOTE CTRL		
→ 1:DISABLE	The default option is disabled.	
2:ENABLE		

# 5.5.4.5 START DEL AY

TAN I DEL AT		
Interface		Description
START-U INPUT: UNIT:	P DELAY 60 SEC	The input value ranges from 20 to 300, which varies with different standards.

### 5.5.4.6 PV IN PUT MO DE

VIIVI OF MODE		
Interface		Description
→1.IND	T MODE SEPENDENT SALLEL	Setup of PV Input mode.  The factory setting by default is Independent, When parallel input is set to be stand-alone mode, PV power will be imbalanced.

### 5.5.4.7 Anti Reverse

Interface	Description
Anti Reverse  -> 1.DISABLE  2.ENABLE	Anti Reverse: Whether Inverter isn't allowed to generate electricity to the Grid.  The default option is disabled. It's means inverter allowed to generate electricity to the Grid

### 5.5.5 BAT SETTING

### 5.5.5.1 BAT SET TING

Interface	Description
BAT SETTING  → 1.BAT TYPE  2.DISC-DEPTH  3.CHARG-CURR  4.BAT-COMM	This interface is used to select battery parameters.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu;  Press ESC button to return to setting interface.

### 5.5.5.1.1 BATTYPE

Interface	Description
BAT TYPE  1.DC-SOURCE  → 2.LEAD-ACID  3.Lithum	This interface is used to select battery type.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu.  Select the LEAD-ACID enter button to enter LEAD-ACID interface;

# 5.5.5.1.1.1 Lead -acid battery paramet er

Interface	Description
LEAD-ACID	This interface is used to select LEAD-ACID battery parameter.
→ 1.CHARG-VOLT	Press Up/Down button to move corresponding options;
2.BAT END VOLT	Press Enter button to enter the selected menu;
3:BAT OVP	
4:BAT CAP	
CHARGE VOLT	This interface is used to set the lead acid battery charging
IN PUT: 13 5.0	voltage.
UN IT: V	

Interface	Description
BAT END VOLT INPUT: 108.0 UNIT: V	This interface is used to set the lead acid battery discharging voltage.
BAT OVP INPUT: 141.0 UNIT: V	This interface is used to set the lead acid battery Charge protection voltage.
BAT CAP INPUT: 0450 UNIT: AH	This interface is used to set the lead acid Battery capacity.

### 5.5.5.2 BAT-COMM

Interface	Description
BAT-COMM 1.RS485 →2.CAN	This interface is used to select battery communication. Press Up/Down button to move corresponding options; Press Enter button to enter the selected menu. The default option is CAN.

# 5.5.6 Grid st and ard

# 5.5.6.1 Grid st d

nu stu				
Interface	Description			
	Description  This interface is used to select Grid standard.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu.  1:AU(Australia) 2:AU-W—(Western Australia)  3:NZ New Zealand 4: UKUnited Kingdom  5:VDE—Germany 6:KR—Korea  7:PHI—Philippines 8:CN—China  9:US-CA—America 10:JP—Japan  11:CUSTOMUser defined			
6.KR 7.PHI	9:US-CA—America 10:JP—Japan			

### 5.5.7 R UN SET TING

# 5.5.7.1 RUN SET TING

Interface	Description
RUN SETTING  1.REACT MODE  2.GRID POWER  3.DISC POWER  4.PV POWER  5.VAC-MIN  6.VAC-MAX  7.FAC-MIN  8.FAC-MAX  9.ACTIVE REP.	This interface is used to select run setting.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu.

# 5.5.7.2 RE ACT MODE

Interface	Description
RUN SETTING  1.REACT MODE  2.GRID POWER  3.DISC POWER  REACT MO DE  1.PO WER FACT OR  2.REACT POWER  3.QU WAVE  4.OP WAVE	This interface is used to select react mode.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu.
POWER FACTOR INPUT: C1.00  REACT POWER IN PUT: +00%	The input value should range between L0.80 and L0.99 or C0.8 and C1.00.  The input value should range between -60% and +60%, which varies with the standard.

### 5.5.7.3 GRID POWER

Interface	Description
GRID PERCENT INPUT: 100%	The input value is power percent of grid.

### 5.5.7.4 DI SC HA RGE PO W ER

Interface	Description
DISC PERCENT INPUT: 100%	The input value is power percent of battery discharge.

### 5.5.7.5 PV POWER

Interface	Description
PV PERCENT INPUT: 100%	The input value is power percent of PV.

### 5.5.7.6 VAC-MIN

_					
	Interface		Description		
	GRID VOLT LOW		The input value of Grid low voltage.		
			It effect when grid mode choose custom.		
	INPUT:	150			
	UNIT:	V			
ľ					

## 5.5.7.7 VAC-MA X

٠.	AC WAX				
	Interface		Description		
	GRID VO INPUT: UNIT:	LT HIGH 280 V	The input value of Grid high voltage. It effect when grid mode choose custom.		

### 5.5.7.8 FAC-MIN

Interface	Description
GRID FREQ LOW INPUT: 57.0 UNIT: Hz	The input value of Grid low frequency. It effect when grid mode choose custom.

### 5.5.7.9 FAC-MAX

te min				
Interface		Description		
GRID FREQ HIGH INPUT: 63.0 UNIT: Hz		The input value of Grid high frequency. It effect when grid mode choose custom.		

### 5.5.8.10 A CTI VE RE F.

Interface	Description
ACTIVE Type 1.PWR-VOLT RES  → 2.PWR-FREQ RES 3.PFC-VOLT RES 4.PFC-FREQ RES 5.Reserved1 6.Reserved2 7.Reserved3 8.Reserved4	This interface is used to select active reference. Press Up/Down button to move corresponding options; Press Enter button to enter the selected menu. Each menu have enable or disable, set it when you need. All default are enable.

### 5.5.8 485 Add ress

# 5.5.8.1 485 Add ress

Interface	Description
485 ADDRESS INPUT: 1	This interface is used to select 485 address.

### 5.5.7.8 FAC-MIN

Interface	Description
GRID FREQ LOW INPUT: 57.0 UNIT: Hz	The input value of Grid low frequency. It effect when grid mode choose custom.

# 5.5.7.9 FAC-MAX

Interface	Description
GRID FREQ HIGH INPUT: 63.0 UNIT: Hz	The input value of Grid high frequency. It effect when grid mode choose custom.

# 5.5.8.10 A CTI VE RE F.

Interface	Description
ACTIVE Type 1.PWR-VOLT RES  → 2.PWR-FREQ RES 3.PFC-VOLT RES 4.PFC-FREQ RES 5.Reserved1 6.Reserved2 7.Reserved3 8.Reserved4	This interface is used to select active reference.  Press Up/Down button to move corresponding options;  Press Enter button to enter the selected menu.  Each menu have enable or disable, set it when you need.  All default are enable.

### 5.5.8 485 Add ress

### 5.5.8.1 485 Add ress

Interface	Description
485 ADDRESS INPUT: 1	This interface is used to select 485 address.

### 5.5.9 485 BAUDR ATE

### 5.5.9.1 BA UD R ATE

Interface	Description
SELECT	This interface is used to select 485 baud rate.
→ 1.2400 bps	
2.4800 bps	
3.9600 bps	

# 5.5.10 L ANG UAGE

### 5.5.10.1 LANGU AGE

Interface	Description
LANGUAGE	This interface is used to select language.
1.Chinese	
→ 2.English	

### 5.5.11 BA CKL IGHT

# 5.5.11.1 B A CKLIG HT

Interface	Description
LIGHT TIME	This interface is used to set light time.
LIGHT TIME	
INPUT: 20	
UNIT: SEC	

### 5.5.12 D ATE/TIME

# 5.5.12.1 DATE/TIME

, ALL ET LINE		
Interface		Description
		This interface is used to set date and time.
DATE/TIME		This interface is used to set date and time.
DATE:	2021-12-25	
TIME:	22:30:00	
WEEK:	Saturday	

### 5.5.13 CLE ARR EC

# 5.5.13.1 Clear history

Interface	Description
DEL REC	This interface is used to clear operation history.
→1.CANCEL	
2.CONFIRM	

### 5.5.14 P ASS W ORD

### 5.5.14.1 PAS SW ORD

Interface		Description	
PASSWORD		This interface is used to set password.	
OLD:	XXXXX		
NEW:	XXXXX		
CONFIRM:	xxxxx		

### 5.5.15 M AINTE NA NCE

### 5.5.15.1 MA IN TENA N CE

Interface		Description
PASSWO		This interface is used to enter maintenance.

# 5.5.16 F CTR Y R ESET

### 5.5.16.1 FACTORYRESET

Interface	Description
FACTORY RESET	This interface is used to reset the inverter.
→1.CANCEL	
2.CONFIRM	

# 5.6 INQUIRE

# 5.6.1 INQUIRE

Interface	Description
INQUIRE  → 1.INV MODULE  2.MODULE SN  3.FIRMWARE  4.RECORD  5.DIAGNOSE	Press Up/Down button to move corresponding options; Press Enter button to jump to the selected menu. Press ESC button to return to other interface.
5.DIAGNOSE	

### 5.6.1.1 INV MODULE

Interface	Description
MODEL 12K	This interface show inverter model

# 5.6.2 MODULE SN

Interface	Description
S / N GUID: XXXXXXXX	This interface show module SN.
XXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX	

### 5.6.3 FIRMWARE

Interface	Description
FIRMWARE ARM: V1.XX.XX DSP: V1.XX.XX	This interface show Software version.

### 5.6.4 RUNNING RECORDS

Interface	Description
REC(01)	This interface show running recodes.
02:Batdisconnect	
UP: 12-25 23:00	
DOWN:	

#### 5.6.5 DIAG NOSE

	Interface	Description
	D. A. G. LOGE	Factory internal use.
	DIAGNOSE	
0000	00 000000	
0000	00 000000	
0000	00 000000	

# 5.7 STATISTIC

#### 5.7.1 STATISTI C

Interface	Description		
STAT.  > 1.TIME STAT.  2.CONNE.TIMES  3.PEAK POWER  4.E-TODAY  5.E-MONTH  6.E-YEAR  7.E-TOTAL	This interface show inverter operation statistic.  1. Inverter operation and Grid-connection time statistic.  2. Inverter Grid-connection times statistic.  3. Displays power peak in history and for the day.  4. Displays statistic for the day (KWH).  5. Displays statistic for the month (KWH).  6. Displays statistic for the year (KWH).  7. Displays statistic of the inverter (KWH).		

Note: 1. E-TOD AY/M ONTH/ YEAR/T OTAL  $\rightarrow$  INPUT  $\rightarrow$  PV/GRID (Consum e)/BATD(Battery discharge)  $\rightarrow$  OUT PUT  $\rightarrow$  BATC(Battery charge)/GRI D(Generation)/ CNS UM (Load consume)

2. If the inverter shut down before 24:00 on that day, and the day statistic will not be stored.

#### **FAULT DIAGNOSIS AND SOLUTIONS**

The inverter is easy to maintain. When you encounter the following problems, please refer to the Solutions below, and contact the local distributor if the problem remains unsolved. The following table lists some of the basic problems that may occur during the actual operation as well as their corresponding basic solutions.

#### **FAULT DIAGNOSIS TABLE**

Co nten t	Co des	Solutions
		Battery discharge over current.
		(1) Not hing need to do, Wait one minute for the inverter to rest art.
Dischg OverCur	00	(2) Checkwhetherthe load is incompliance with the specification.
		(3) Cut off all the powe r and shut down all the mac hines; disconnect
		the load and plug in to restart machines, then check
		The load power is greater than other power(PV,BAT).
		(1) Checkwhetherthe load is incompliance with the maximum
		power of the machine.
Over Load	01	(2) Cut off all the power and shut down all the machines; disconnect
		the load and plug in to restart machines, then check whether the
		load is short circuited if the fault has been elimin ated.
		(3) Contact c ustomers ervice if e rror warnin g continues.
Bat Disc onnect	02	Battery Disconnect. (Battery voltage not identified)
		(1) Checkwhetherthe battery is connected.
butbisconnect		(2) Check if battery wiring port is open circuited.
		(3) Contact c ustomers ervice if e rror warnin g continues.
	03	Battery voltage low that normal range.
		(1) Checking System Settings, If so, power off and restart.
Bat Under Vol		(2) Check if the grid power down. If so, waitting for the grid power
		up, the inverter will automatically c harge.
		(3) Contact c ustomers ervice if e rror warnin g continues.
Bat Low capacity	04	Battery Low that setting c apacity.(SO C< 100% -DOD )
	05	The battery voltage is greater than the lnverter maximu m voltage.
Bat Over Vol		(1) Chec king System Settings, If s o, power off and restart.
		(2) Contact customer service if e rror warning continues.
C'. II.	06	Grid v oltage is ab nor mal
Gird low vol		(1)Chec kifth e grid is abnor mal.
		(2) Restart the inverter and wait until it functions normally.
Grid ov er v ol	07	(3) Conta ct c ust omer se rvice if error warning continues.

		Grid Fr equency is abnormal.
Grid low freq	08	(1)Chec k if the grid is abnormal.
Grid overFreq	09	(2) R estart the in Verter and Wait until it functions nor mally.
		(3) Conta ct c ust omer se rvice if error Warnin g continues.
gfci over	10	Inverter GFCI e xcee ds standard.
		(1) Ch eck PV string for direct or in direct grounding phenomenon.
		(2) Ch eck periphe rals of machine for current le akage.
		(3) Contact the local in verter cust omer service if fault remains unremoved.
bus under vol	13	BUS volta ge is lower than norma I.
		(1) Ch eck the in put m ode setting is correct.
		(2) R estart the inverter and wait until it f unctions normally.
		(3) Contact c ust omer service if error warning continues.
	14	BUS volta ge is over maximum value
bus over vol		(1) Ch eck the in put m ode setting is correct.
		(2) Restart the inverter and Wait until it functions normally.
Inv over c ur	15	The inverter cur rent excee ds the normal value.  (1) Restart the inverter and wait until it f unctions normally.
		•
Ch g over cur	16	Battery charge current over than the Inverter maximum voltage.  (1) Restart the inverter and wait until it f unctions normally.
Bus vol os c	17	Bus voltage instability.  (1) Check the input and out put mode setting is correct.
		(2) R estart the inverter and wait until it f unctions normally.
Inv under vol	18	INV voltage is abnormal
		(1)Chec k if the INV voltage is abnormal.
la., a., a., l	1.0	(2) R estart the inverter and wait until it functions normally.
Inv over vol	19	(3) Conta ct c ust omer se rvice if error warnin g continues.
	20	INV frequency is abnormal
InvFre qAbnor		(1)Chec k if the INV frequency is a bnormal.
		(2) R estart the inverter and wait until it f unctions nor mally.
		(3) Contact customer service if error Warning Continues.
igbt temp h igh	21	The invertert empera ture is higher than the allowed value  (1) Cu to ff all the power of the machine and wait one hour, then turn
		on the power of the ma chine.
bat over temp	23	Battery temp erature is higher than the all lowed value.
		(1) Disconnect the battery and reconnect it a fter an hour.
bat Un de rTemp	24	Batter y temp eratur e is low than the allowed value.
		(1) Check the ambient temperature near the battery to see if it meets the
		spec ifications.
BMS comm.fa il	27	Com munication between lithium battery and inverteris
		abnormal.
		(1) Check the cable, crystal, Line sequence.
		(2) Checking the Battery switch.

		Fan fa il
Fan fa il	28	(1) Check whether the Inverter temper ature is a bnormal.
		(2) Check Whether the fans run pr operly .(If you can see it)  The grid fault phase.
Grid Phaseerr	30	(1) Check power grid wiring
		PV Arc Fault
Arc F ault	31	(1) Check Photovoltaic panels, PV wire.
		(2) Contact cust omer service if error warning continues.
bus soft fa il	32	<ul><li>(1) Restart the inverter and wait until it functions normally.</li><li>(2) Contact cust omerservice if error warning continues.</li></ul>
inv so ft fa il	33	
bus short	34	
inv shor t	35	
		Fan fa ult.
fan fault	36	(1) Check whether the Inverter temper ature is a bnormal.
		(2) Check whether the fans run properly. (If you can see it)  (1) Check if the PE line is connected to the inverter and is connected to
PV iso low	37	the ground.
		(2)Conta ct cust omer service if error warning continues.
Bus Relay Fault	38	(1) Restar t the inverter and wait until it functions normally. (2) Contact cust omerservice if error warning continues.
